% Difference in Sales from the Previous Year of Order Date and Sales broken down by Order Date Year vs. Order Date Month and Category. Color shows sum of Profit. The marks are labeled by % Difference in Sales from the Previous Year of Order Date and Sales. The view is filtered on Category, which keeps Furniture, Office Supplies and Technology.

## Global Sales and Profits

Map based on Longitude (generated) and Latitude (generated). Color shows sum of Profit. Size shows sum of Sales. Details are shown for Country and State. The data is filtered on Category, which keeps Furniture, Office Supplies and Technology.

# Sales by Sub-Category

Sum of Sales for each Sub-Category broken down by Category. Color shows sum of Profit. The view is filtered on Category, which keeps Furniture, Office Supplies and Technology.

# Customer breakdown

Sum of Shipping Cost vs. sum of Profit. Shape shows details about Category. Details are shown for Customer ID. The view is filtered on Category, which keeps Furniture, Office Supplies and Technology.

# My First Tableau project

I am learning Tableau and this is my first story.  
Working with the dataset called Global Superstore data which contains transactions of customers purchasing specific products all over the world. I imported the Excel file and created a connection with Global Superstore returns text file. Created a cross database join , then changed to Left join to include all orders. Made a Custom Split of the Order ID field. Learnt about Connections: Live and Extract.

Moving on, in the data pane, there are dimensions and measures: column headers of the dataset. Dimensions are categorical fields: Date, Customer, Category. These are what we want to slice and dice our data on. Measures are metrics which we use to analyze our data. These can be continuous or discrete.

First, I am interested in analyzing how each category is doing per segment over the existing market in terms o..

# My First Tableau project

I am learning Tableau and this is my first story. Working with the dataset called Global Superstore data which contains transactions of customers purchasing specific products all over the world. ..

Moving on, in the data pane, there are dimensions and measures: column headers of the dataset. Dimensions are categorical fields: Date, Customer, Category. These are what we want to slice and dice our data on. Measures are metrics which we use to analyze our data. These can be continuous or discrete.

First, I am interested in analyzing how each category is doing per segment over the existing market in terms of sales. So here's my chart.

The next viz. looks at the Sales per category over the four years.

Ideas used: Drilling down from year to months. Quick Table Calculation for the Sales Measure for Year over Year growth. Tooltipping S..

# My First Tableau project

The next viz. looks at the Sales per category over the four years.

Ideas used: Drilling down from year to months. Quick Table Calculation for the Sales Measure for Year over Year growth. Tooltipping Sales data as a display when you hover over the points. Then adding annotations to point out highs and lows on the graph. Exporting the image to other platforms to share. Also, copying the data from the viz to Excel. Duplicating as Crosstab

Next, I am interested in looking at the profits for each category. I created a crosstab using duplicate as a crosstab and switching rows to columns. Moving the Profits Measure pill to Color and by changing the mark type to color and add..

# My First Tableau project

The next viz. looks at the Sales per category over the four years.

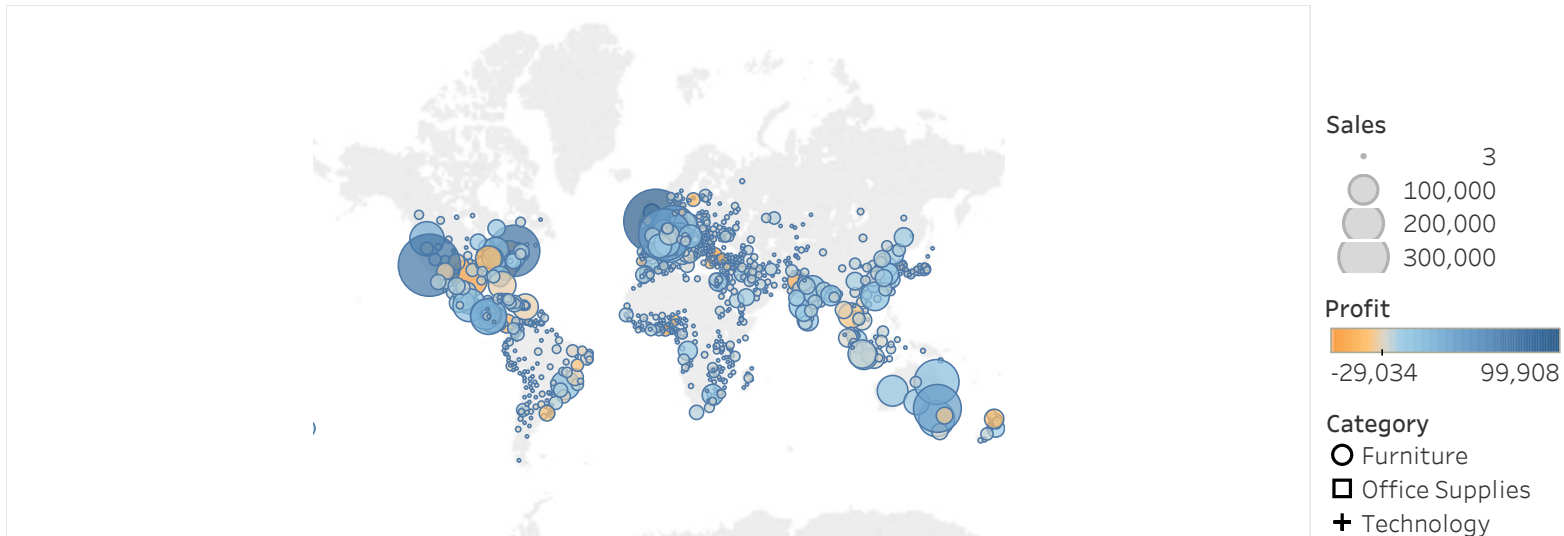

Ideas used: Drilling down from year to months. Quick Table Calculation for the Sales Measure for Year over Year growth. Tooltipping Sales data as a display when you hover over the points. Then adding annotations to point out highs and lows on the graph. Exporting the image to other platforms to share. Also, copying the d..

Next, I am interested in looking at the profits for each category. I created a crosstab using duplicate as a crosstab and switching rows to columns. Moving the Profits Measure pill to Color and by changing the mark type to color and adding mark labels. Then I also added a highlighter from the Category pill dropdown. It is evident that Furniture has low profits. But is this trend across all regions?
